AUTHOR Ashby, Alison; Dale, Janice
TITLE Digest of Open University Statistics 1971-1987. Report No. 24.
INSTITUTION Open Univ., Walton, Bletchley, Bucks (England). Inst. of Educational Technology.
PUB DATE Feb 89
NOTE 84p.
PUB TYPE Reports - Research/Technical (143) -- Statistical Data (110)

EDRS PRICE MF01/PC04 Plus Postage.
DESCRIPTORS *Adult Students; Bachelors Degrees; College Graduates; *Distance Education; Educational Background; Employment Level; Foreign Countries; Higher Education; Individual Characteristics; *Open Universities; *Student Characteristics; *Undergraduate Students; Undergraduate Study
IDENTIFIERS *Open University (Great Britain)

ABSTRACT

This document contains an analysis of demographic information on Open University students from 1971 to 1987. Three sections analyze the characteristics of the following: (1) finally registered new students (1971-1987); (2) finally registered associate students (1975-1987); and (3) finally registered associate short course students (1984-1987). The analyses concentrate on the region, sex, age, occupation, and educational qualifications of the students. Supporting data are presented in statistical tables found in an appendix. Tables 1a-1d present data on new undergraduates by region, age and sex, occupation, and educational qualifications. Tables 2a-2d present data on associate students by region, age and sex, occupation, and educational qualifications. Tables 3a-3e present data on associate short course students by region, age, sex, occupation, and educational qualifications. Tables 4a-4d show total undergraduates by region, sex, occupation, and educational qualifications. Tables 5a-5e show bachelor of arts graduates by region, sex and age, occupation, educational qualifications, and year of entry. Tables 6a-6f depict honors graduates by region, sex and age, occupation, educational qualifications, year of entry, and classification. Tables 7a-7d show disabled undergraduates by region, sex and age, occupation, and educational qualifications. (YLB)

The Student Research Centre is a part of the Open University's Institute of Educational Technology. The main work of the Centre is, firstly, to evaluate the Open University's courses and learning materials and, secondly, to carry out research into all aspects of students' experiences of learning as adult distance learners. Both qualitative and quantitative methodologies are used in these areas. The aim of the Centre's work is to improve the quality of the Open University's teaching materials and teaching system, and to raise awareness of the effects on students of university policy decisions and of different forms of course provision.

INTRODUCTION

The last edition of the 'Open University Annual Digest of Statistics' was printed in 1982. Since then the University has not produced a comprehensive guide to University statistics for both internal and external use. The information is of course available internally but has to be obtained from a number of different sources. The 'Pocket Guide' produced by the Planning Office provides a summary of OU statistics. However there is clearly a need for more detailed information; a new publication 'The Open University Statistics 1987' will be available shortly to meet this need. As the title suggests it concentrates on data for 1987 and includes students/clients, graduates, staff and finance. Whereas the old Digest included historical tables of data, the new document only includes statistical tables for 1987; greater emphasis is placed on explanation and analysis. Appendix II provides a commentary on changes in students characteristics with graphical representation, where relevant, but does not include the actual data.

This document is intended for people who are specifically interested in demographic trends and require access to the data for more detailed analysis. The commentary in Appendix II of the 'The Open University Statistics 1987' is repeated here with minor changes and the supporting data is included in tables 1a - 1d, 2a - 2d and 3a - 3e in Appendix 1. In addition there are tables showing total undergraduates (tables 4a - 4e), BA and Honours graduates (tables 5a - 5f and 6a - 6f) and disabled undergraduates (tables 7a - 7d) for the years from 1971 to 1987. Since the figures for each year include students from different years of entry, it is not possible to comment on trends. However the tables do give an indication of the total numbers and characteristics of all undergraduates and disabled students finally registered in a given year, and the number of students graduating in a given year.

Please note that the total figures shown in the tables may differ a little from those which appear in the 'Pocket Guide' produced by the Planning Office. This is because the data has been obtained from different files. However, this has no influence on the trends examined in this paper.

Studies in trends in graduation rates have been undertaken. This requires a more complex analysis where cohorts of students are followed through to graduation. The most recent publication available is, Woodley, A. "Graduation and beyond": Open Learning Volume 3 Number 1, February 1988.

Undergraduate applicants are considered each year in a separate document "Analysis of applicants for undergraduate study with the Open University in 1988".

The analysis that follows concentrates on the age, sex, region, occupation and educational qualifications of students from 1971 (where data is available) up to and including 1987. In sections commenting on regional variations in England reference is made to regions in the 'North' and 'South'. The 'South' includes London, South, South West, East Anglia and South East regions. The 'North' includes the West Midlands, East Midlands, Yorkshire, North West and North regions.

SECTION 1 - UNDERGRADUATES - NEW ENTRANTS (1971 - 1987)

(See tables 1a - 1d)

1.1. Region - The fluctuations within individual regions have been fairly small over the period. No region's share of the undergraduate population changed by more than 3%. However Figure 1 does show that the proportion of undergraduates from regions in the 'South' has remained higher than the proportion from regions in the 'North'. With the exception of the period 1984 to 1986 the gap has been increasing. This is accounted for partly by the increase in students from the 'South' (1971 = 43.7%, 1987 = 46.7%) and partly by the increase in students from Scotland (1971 = 8.5%, 1987 = 11.3%). The percentage of undergraduates from the 'North' has fallen from a peak of 41.6% in 1974 to 35.2% in 1987.

Figure 1 Analysis of new undergraduates by region

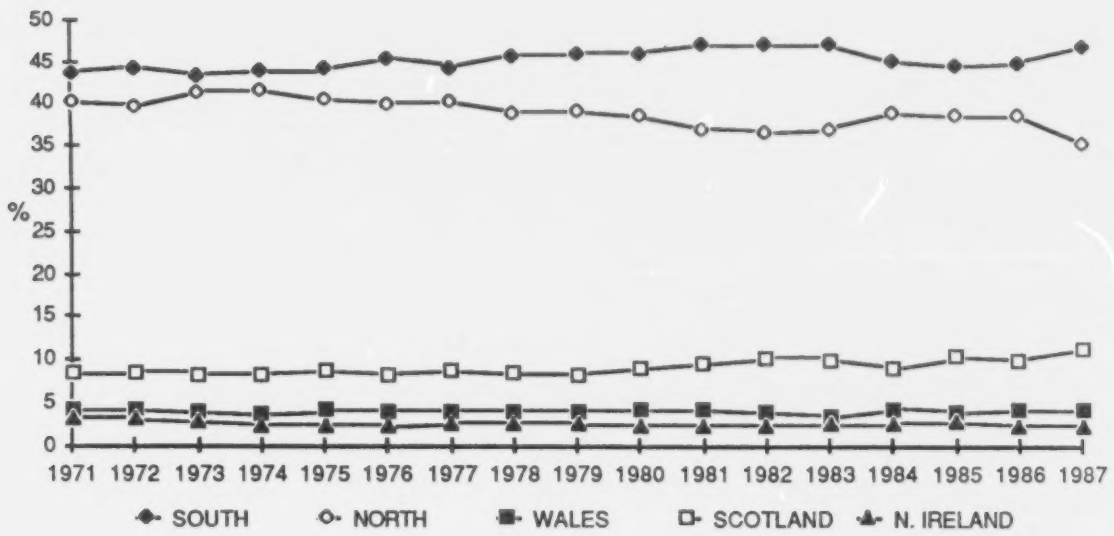

Figure 2 illustrates the differences between the UK Adult Population Census data for 1971 and new OU undergraduates by region for 1971. For the majority of regions the figures are very close. The percentage of new OU undergraduates compared to the percentage of the UK Adult Population was higher in only three regions - the South, East Anglia and Northern Ireland.

Figure 2 Comparison of UK Population Census (1971) with new undergraduates in 1971

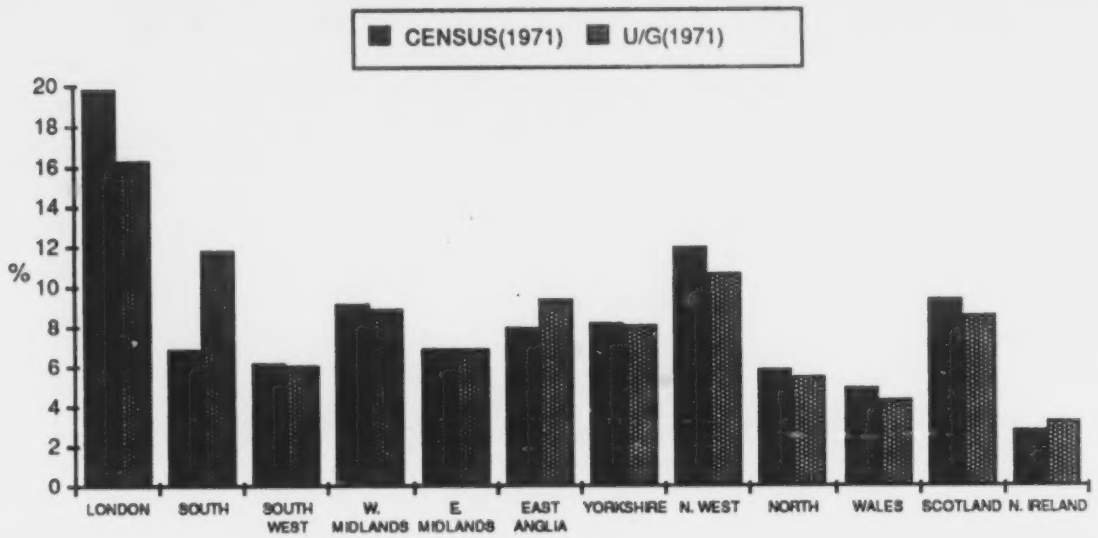

Figure 3 illustrates the differences between the UK Population Census data for 1981 and new OU undergraduates in 1981 and 1987. The percentage of new OU undergraduates for both 1981 and 1987, compared to the percentage of the UK Adult Population for 1981 has remained higher in the South and East Anglia. In addition the South East (new OU region established in 1973), the South West and Scotland had a higher percentage of new OU undergraduates in 1981 and 1987 compared to their respective census figures for 1981. However in Northern Ireland the percentage of new OU undergraduates for both 1981 and 1987 fell below the census figure for 1981.

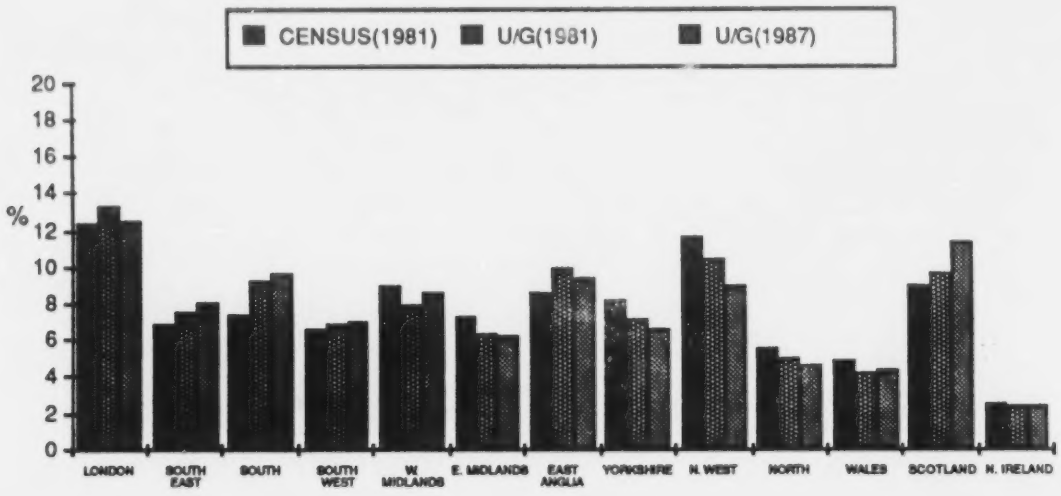
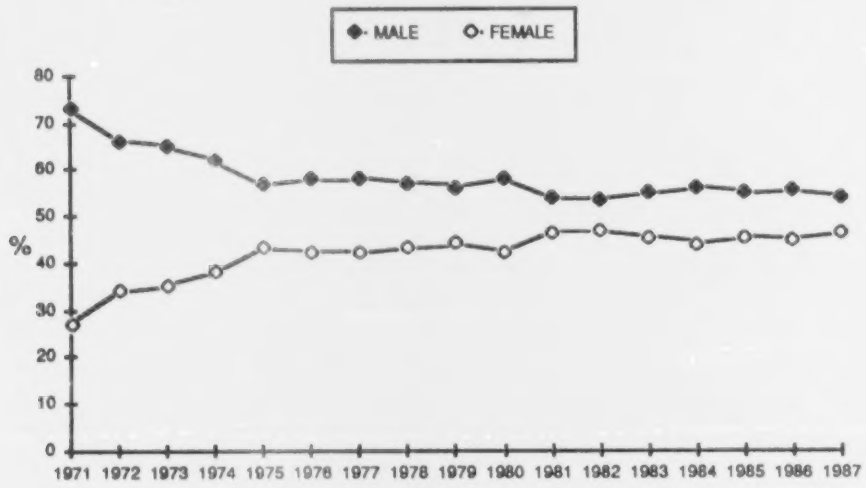
Figure 3 Comparison of UK Population Census (1981) with new undergraduates in 1981 and 1987



Although London did have a higher percentage of new OU undergraduates compared to its percentage of the UK population in 1981 the percentage of new OU undergraduates from London in 1981 (12.5%) was almost equal to the 1981 Census figure (12.4%).

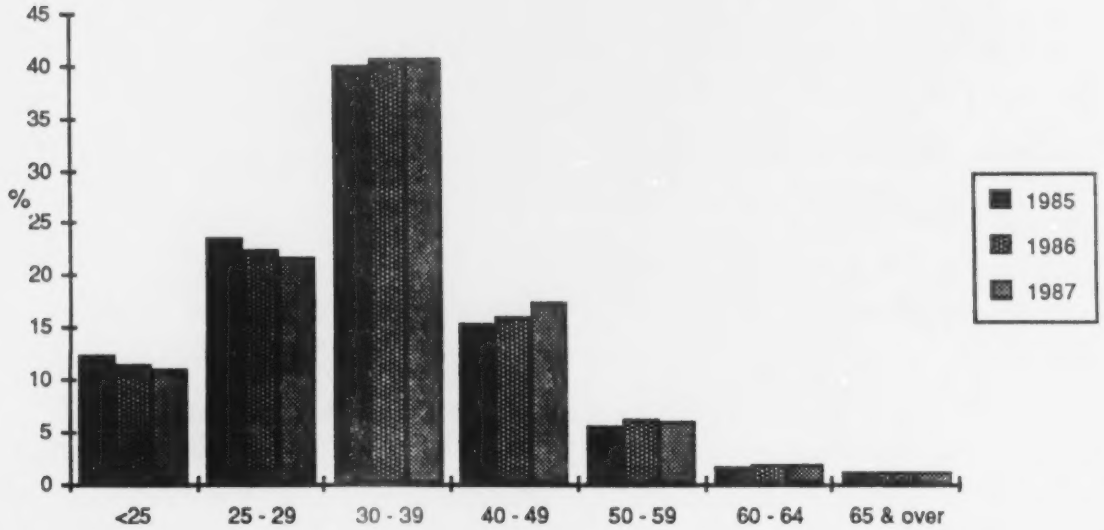
1.2. Sex - Figure 4 shows the rapid increase in women entering the undergraduate programme between 1971 (27.0%) and 1975 (43.2%). Since then the percentage of women has continued to increase at a much slower pace, reaching 46.1% of new students in 1987.

Figure 4 Analysis of new undergraduates by sex (1971 - 1987)



1.3 Age - The median age of undergraduates has increased from 31 in 1975 to 34 in 1987. Figure 5 shows the shift in the different age groups over the last three years. The percentage of new undergraduates under 30 has fallen from 36.1% to 33%. This is mainly accounted for by the increase in entrants aged between 40 and 49 (1985 = 15.4%, 1987 = 17.3%).

Figure 5 Analysis of changes in age of new undergraduates between 1985 and 1987

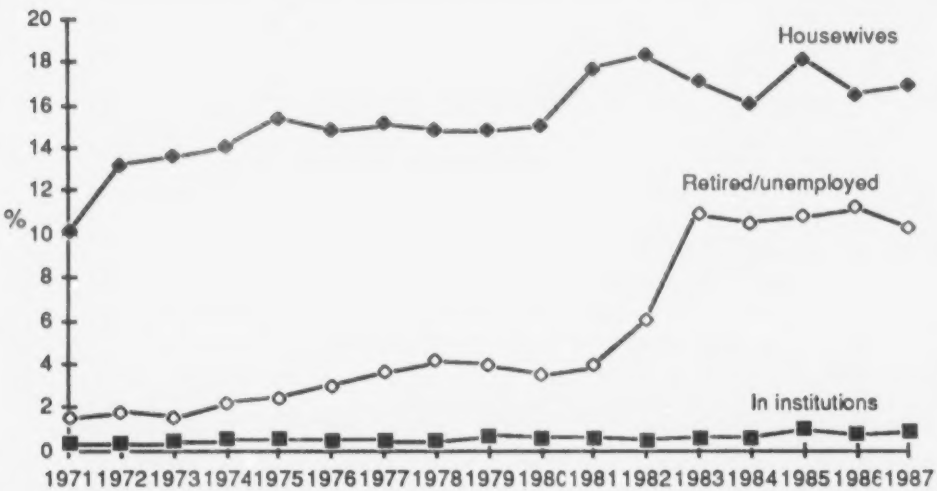


1.4 Occupation - The most significant change has been the decline in the proportion of teachers entering the undergraduate programme. Figure 6a shows how this figure has

fallen from 40.1% in 1971 to 9.5% in 1987. Two categories have shown significant increases - housewives and retired/unemployed. The percentage of housewives increased rapidly between 1971 (10.1%) and 1975 (15.5%), and again between 1980 (15.1%) and 1982 (18.3%); since 1982 the figure has remained above 16%. The retired/unemployed category increased steadily from 1.6% in 1971 to 3.9% in 1981 followed by a rapid increase to 10.9% in 1983. Since then it has remained close to this figure. Although the housewives category does include those housewives with part-time work the figures do reflect the significant growth in the proportion of entrants not in paid work as shown by Figure 6b.

Figure 6a Proportion of teachers entering as new undergraduates (1971 - 1987)

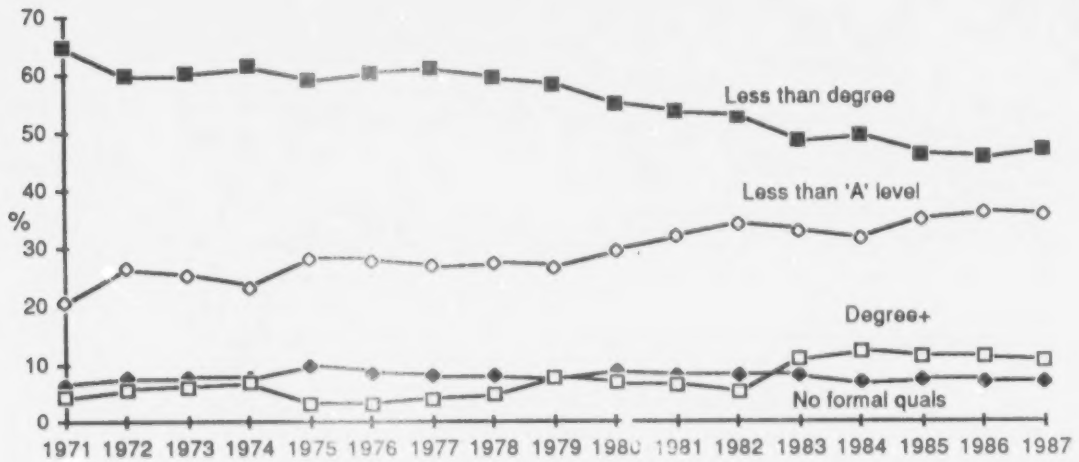
Figure 6b Proportion of new undergraduates not in paid work (1971 - 1987)



The other occupational categories have remained relatively stable with a slight increase in most groups to compensate for the fall in teachers. The only groups showing a slight decline are administrators and managers (1976 = 4.6%, 1987 = 3.9%) and scientists and engineers (1976 = 4.0%, 1987 = 2.9%).

1.5 Educational qualifications - Changes in occupational status have led to corresponding changes in the educational qualifications of entrants to the undergraduate programme. The proportion of undergraduates with teaching certificates has fallen from 41.4% in 1971 to 9.1% in 1987; in line with the reduction in teachers. Figure 7 shows that the proportion of entrants with qualifications below degree level has increased significantly.Although the proportion of entrants with no formal qualifications did increase initially and reached nearly 10% in 1975 (9.7%) this level has not been sustained and the figure has remained closer to 7% over the last five years. The proportion of entrants with degrees or higher qualifications ranged between 4% and 7% until 1983 when the figure reached 10.7%. Since then the figure has remained above 10%.

Figure 7 Analysis of new undergraduates by educational qualifications (1971 - 1987)



SECTION 2 - ASSOCIATE STUDENTS - (1975 - 1987)

(See tables 2a - 2d)

2.1 Region - As in the undergraduate programme, fluctuations within individual regions have been fairly small in the associate programme. Yorkshire has shown a slight decline from 6.5% in 1975 to 4.4% in 1987 whereas the North has shown a corresponding increase from 4% to 6%. Scotland has shown a slight increase although not as marked as in the undergraduate programme. Although the figures have remained fairly stable, Figure 8 shows that the gap between the 'North' and the 'South' is even greater in the associate programme than in the undergraduate programme. In the last five years regions in the 'South' have accounted for approximately 50% of associate students compared to approximately 35% from regions in the 'North'.

Figure 8 Analysis of Associate students by region (1975 - 1987)

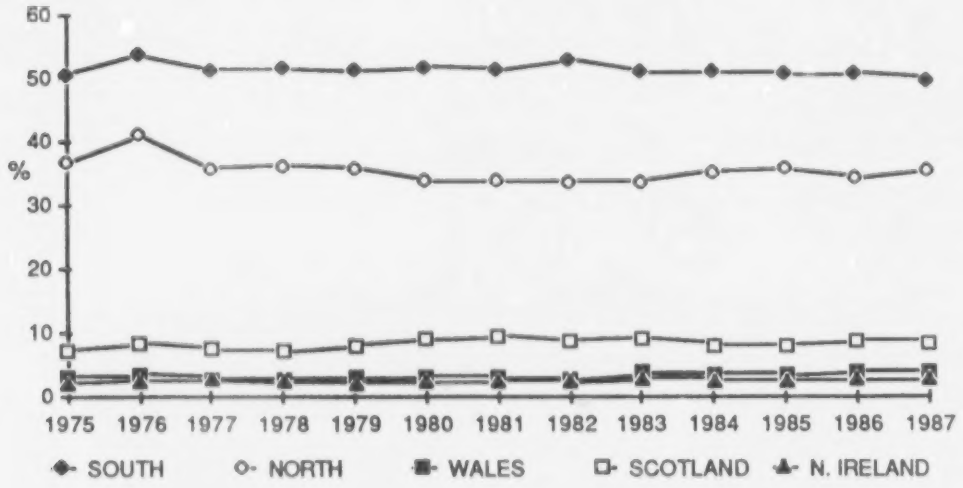


Figure 9 illustrates the differences between the UK Population Census data for 1981 and OU associate students for 1981 and 1987 by region. The proportion of associate students from regions in the 'South', in both 1981 and 1987, is either close to or above the corresponding census figure. In the 'North' the OU figures for 1981 and 1987 are below the census figures in all regions with the exception of two; in 1987 the OU figure was almost equal to the census figure for the W. Midlands and above the census figure for the North.

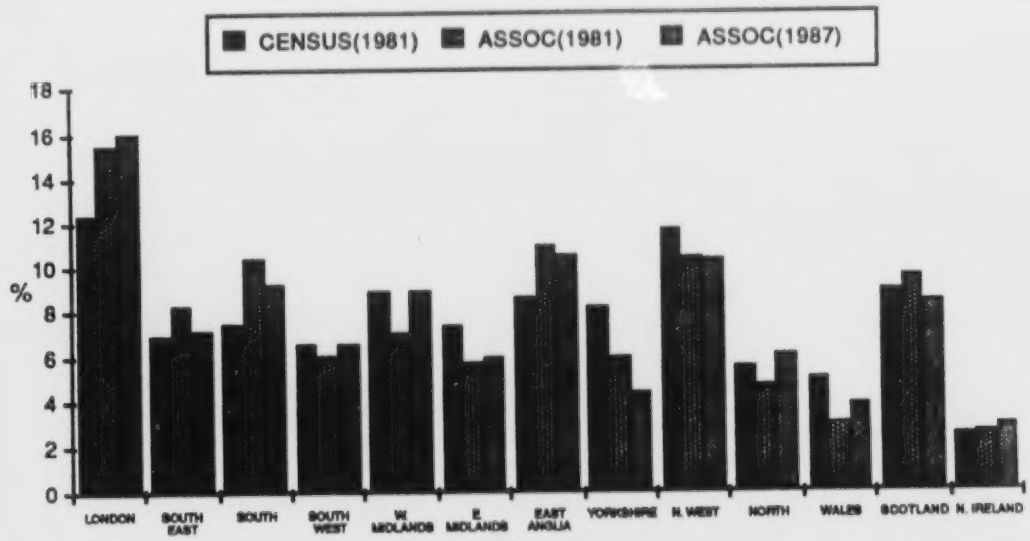
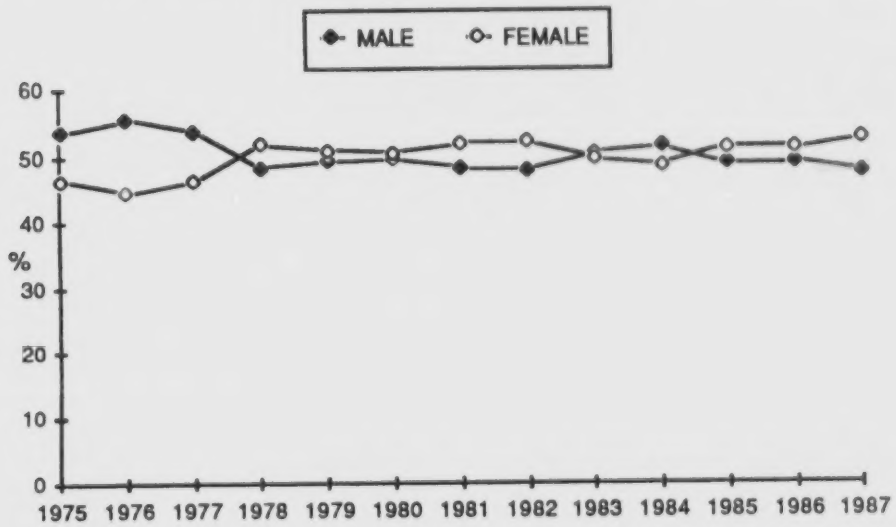
Figure 9 Comparison of UK Population Census (1981) with associate students in 1981 and 1987



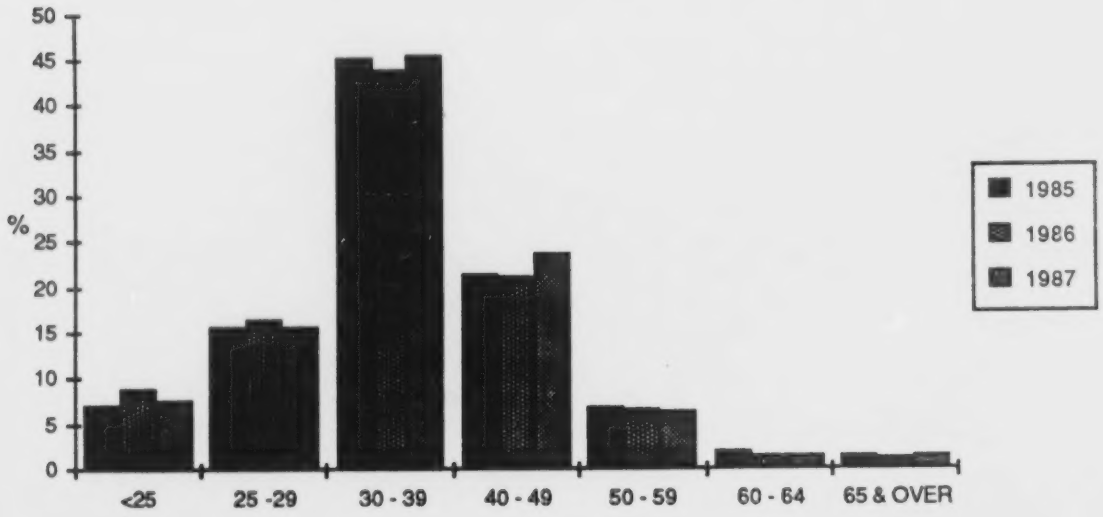
1.2 Sex - Figure 10 shows that the proportion of women entering the associate programme has increased from 46.4% in 1975 to 51.8% in 1978. Since then women have continued to account for just over half the associate student population with the exception of 1983 and 1984 when the number of men was slightly higher than the number of women.

Figure 10 Analysis of associate students by sex (1975 - 1987)



1.3 Age - The median age of associate students has remained slightly above the median age of undergraduates at 35 in 1975 and 36 in 1987. Figure 11 shows the distribution of students within specified age groups for the last three years. In 1987 nearly 70% of associate students were aged between 30 and 49 compared to 58% of undergraduate entrants.

Figure 11 Analysis of changes in the age of associate students between 1985 and 1987



1.4 Occupation - Teachers form the largest occupational group within the associate programme. Figure 12a shows that the proportion of teachers has fluctuated over the period. The figure increased from 47.9% in 1975 to a peak of 54.7% in 1978. This was followed by a downward trend to 30.3% in 1983. During the last five years the proportion of teachers has been increasing again and reached 40.8% in 1987.

Figure 12a Proportion of teachers entering as associate students (1975 - 1987)

Significant increases have taken place in the proportion of housewives and unemployed/retired associate students. Figure 12b shows that the increase has followed a similar pattern to the undergraduate programme. The proportion of housewives reached a peak of 13.3% in 1984 This has been followed by a slight downward trend to 11.5% in 1987. However, this still represents a considerable increase compared to 1975 (5.2%). The proportion of retired or unemployed students increased from 1.2% in 1975

to 9.8% in 1983. Since then the figure has remained slightly below this level (1987 = 8.2%).

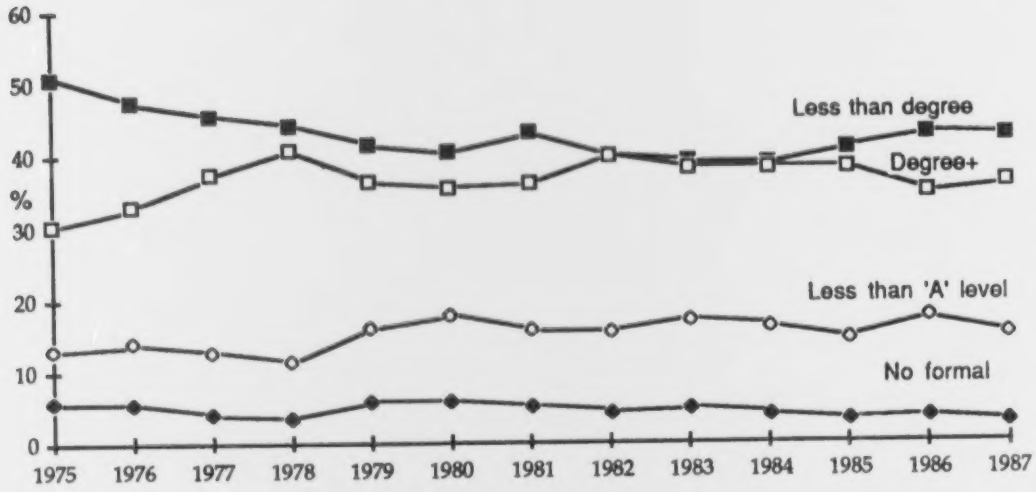
Figure 12b Proportion of associate students not in paid work (1975 - 1987)

The changes in other occupations have been relatively stable with two exceptions. The proportion of administrators and managers has fallen from 9.4% in 1976 to 2.7% in 1987. The greatest variation has occurred in the proportion of entrants from the professions and arts. From 21.4% in 1975 the figure fell to 10.5% in 1978. This was followed by an upward trend until 1980 (16.9%); since then the figure has been declining and professions and arts accounted for only 9.4% of associates in 1987.

1.5 Educational qualifications - Whereas the percentage of teachers entering the associate programme increased significantly between 1975 and 1978, the percentage with teaching certificates showed only a slight increase from 27.5% to 29%. This was followed by a significant decline to 16.5% in 1983; in line with the fall in the proportion of teachers. There has been an increase during the last five years (1987 = 21.0%) although this has not been as marked as the increase in the proportion of teachers .

Figure 13 shows that the proportion of associate students with a degree or higher qualification increased from 30.5% in 1975 to 39.9% in 1984. Although this figure has remained at a slightly lower level since then over one third of associates held a degree or higher qualification in 1987 (36.0%). By contrast very few students enter the associate programme without formal qualifications (1987 = 2.8%). In the undergraduate programme only 10% of new entrants have a degree or higher qualifications whilst 7% have no formal qualifications.

Figure 13 Associate students by previous educational qualifications (1975 - 1987)



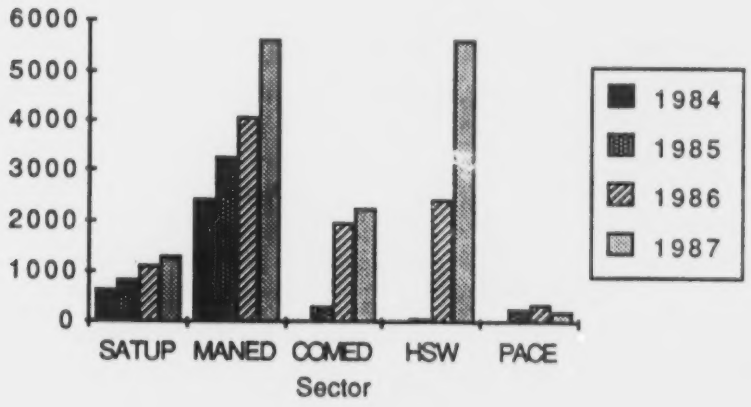
SECTION 3 - ASSOCIATE SHORT COURSE STUDENTS (1984 - 1987)

(See tables 3a - 3e)

The SACS system was initially introduced in 1984 and corresponded with a change to optional assessment for course work. At first it covered just two sectors - SATUP and OBS (other sectors were still being recorded on the 'old system'). The other sectors - HSW, COMED and PACE came into the system in 1985.

Figure 14 summarises the growth in associate short courses in each continuing education sector in the period 1984 - 87. The numbers of students registering for Health and Social Welfare (HSW) and Management Education (MANED) courses have risen quite dramatically. There is also continuing interest in the Community Education (COMED) courses, whilst Scientific and Technological Updating (SATUP) and Personal and Cultural Education (PACE) courses have remained less popular. However, these broad trends hide some interesting demographic and regional variations, which are discussed below.

Figure 14 Associate short courses - registered students by sector 1984 - 1987



3.1 Scientific and Technological Updating Courses:-

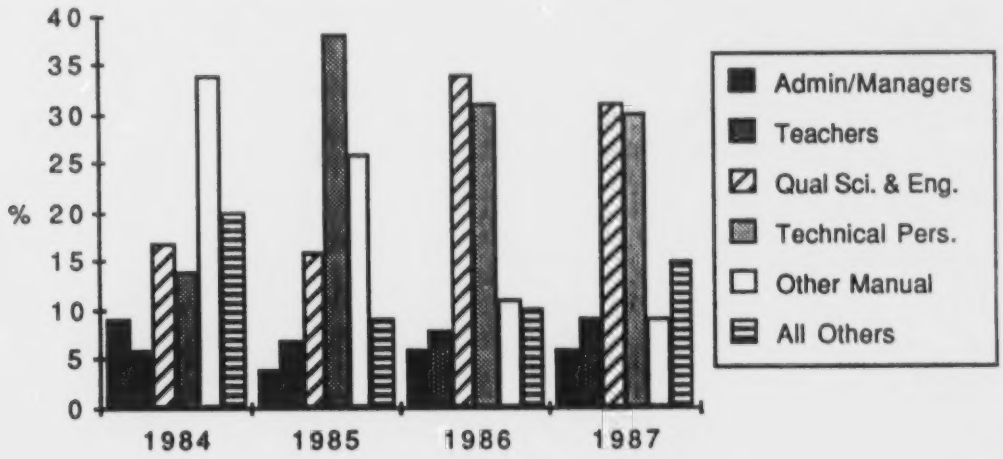
3.1.1 Regions - The regional distribution of registered SATUP students indicates that the highest number of students are located in southern England, with 42 - 46% of these students resident here between 1984 and 1987. However numbers in northern England have increased from 35% in 1984 to 42% in 1987. Registrations in Northern Ireland and Wales are now at their lowest, at 1.5% and 4% respectively, whilst Scotland has also shown a decline from 12% in 1986 to 7.5% in 1987. Currently therefore growth is most in evidence in the northern regions with an annual increase between 1986 and 1987 of 8% compared with 3.5% in the south.

3.1.2 Gender - The percentage of female students has shown a marked decrease from 20% in 1984 to 7% in 1987.

3.1.3 Age - Most students on the SATUP programme are aged between 25 - 29 (25%) and 30 - 39 (35%), although the 1987 figures indicate a move away from the younger students aged under 25 (14% in 1987) towards the 40 - 49 age group (18% in 1987).

3.1.4 Occupation -The occupations of students studying SATUP courses are concentrated among the qualified scientific & engineering and technical groups. The representation of these two groups has doubled over the 4 years 1984-87, whilst the manual group, which initially represented 34% of students in 1984, has now decreased to just 9%. These changes are reflected in Figure 15.

Figure 15: SATUP registered students by occupational group



3.2 Management Education

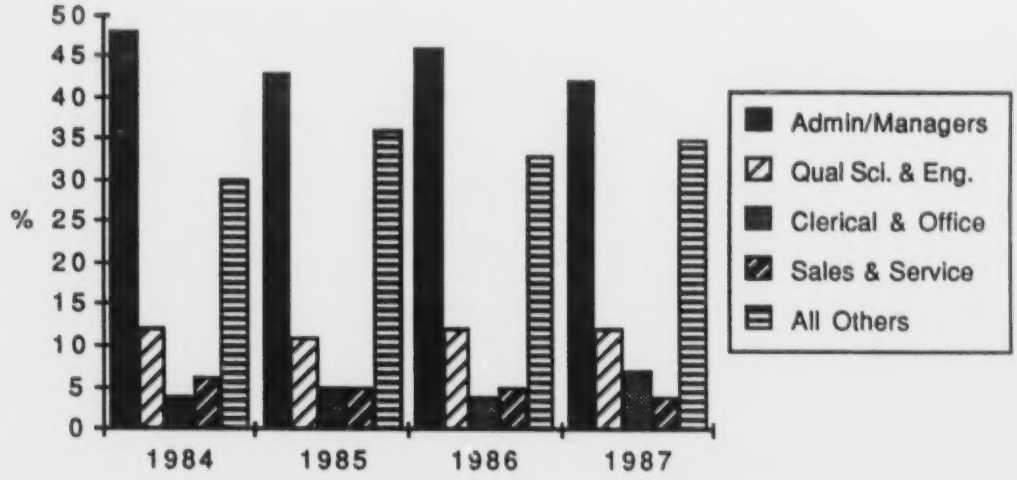
3.2.1 Regions - Nearly half of all MANED students are to be found in London, the South East, South and East Anglia. Over the period 1984-87 there has been no more than a 2% variation in the number of students to be found in each region, and in 1987 the regional pattern saw 58% of students in southern England, 29% in northern England, 4% in Wales, 7% in Scotland and 2% in Northern Ireland.

3.2.2 Gender - The number of women studying MANED courses has steadily increased from 16% of the total in 1984 to 32% in 1987.

3.2.3 Age - The proportion of MANED students in the 30 - 39 year age group has remained constant at approximately 48% of all students. Since 1984 the 25 - 29 age group has increased from 16% to 20% whilst the 40 - 49 age group has slightly declined from 24% to 22%.

3.2.4 Occupation - The majority of MANED students define their occupation as administrators or managers (48% in 1984, 42% in 1987). The next largest occupational group is that of qualified scientists and engineers which has remained constant at 12% over the period 1984 - 87. The only noticeable changes have been in the less well represented groups, with the percentage of students in clerical and office jobs doubling from 3% to 7%, whereas those in other manual and sales and service occupations have both nearly halved.

Figure 16 MANED registered students by occupational group



3.3 Health and Social Welfare

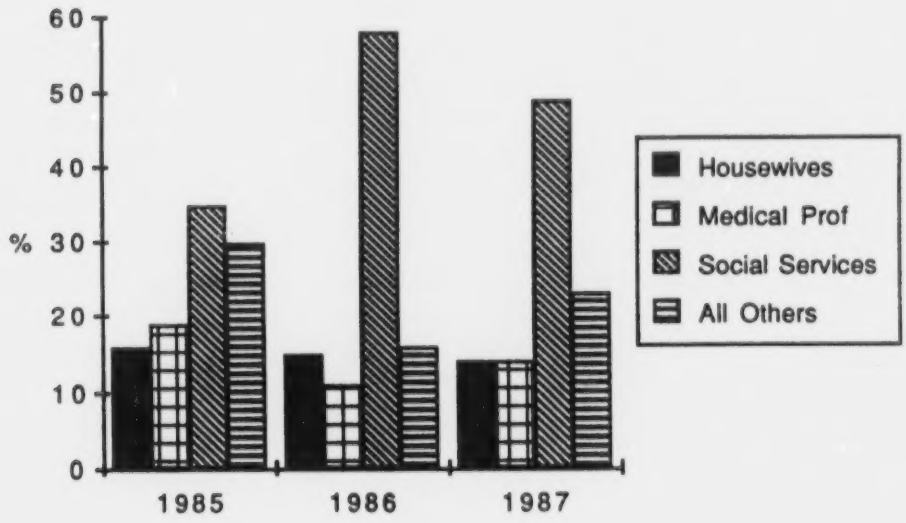
3.3.1 Regions - The regional distribution of these students has shown considerable change in southern England where the number of registered students has fallen from 51% of the total in 1985 to 39% in 1987, with most of this change taking place in East Anglia. In contrast the number of students in northern England has remained around 40%, whilst those in Wales has doubled from 5% to 10%. The percentage of students in Scotland has fluctuated between 5% and 14%, and remained constant in Northern Ireland at 4%.

3.3.2 Gender - In 1985 the male/female split on HSW courses was 9% and 91% respectively. This pattern has slowly changed to a split of 20% male and 80% female in 1987.

3.3.3 Age - The mix of ages over the three years 1985-87 has shown little change, with the under 25 age group accounting for approximately one-quarter of registered students. However, the largest age group over this period has been the 30 - 39 years group, representing almost one-third of all students.

3.3.4 Occupation - As expected, the largest group of HSW students are employed in the social services area. This sector has shown an increase from 35% in 1985 to 49% of the total in 1987. The only other occupational groups of any size are housewives and the medical profession, each representing about 14% of all students in 1987. Figure 17 shows movements in the occupation of students over the period.

Figure 17 HSW registered students by occupational group



3.4 Community Education

3.4.1 Regions - There has been little regional variation in northern and southern England during 1985 - 87, with an average of 40% and 37% respectively of all registered students being located in those two main geographical regions. However, over the period 1985 - 87 there has been a decrease in the student percentage in Scotland by 10% down to 7% in 1987, an increase of 6% in Northern Ireland up to 8%, and an increase of 2% in Wales up to 6%.

3.4.2 Gender - In 1985 the percentage of female students studying COMED courses was 68%, and this has increased to 84% in 1987.

3.4.3 Age - The percentage of COMED students aged under 25 has shown a considerable increase over the three years, from just 20% in 1985 to 33% in 1987, whilst the over 30 age bands have shown a corresponding decline from 58% to 45%. The percentage of students aged 25 - 29 has remained constant at between 21% and 23%.

3.4.4 Occupation - Housewives have accounted for the greatest percentage of people studying COMED courses, being 35% in 1985, 51% in 1986, and 39% in 1987. The representation of other occupational groups has remained fairly constant, apart from the retired and unemployed group which has shown an increase from 12% in 1985 to 23% in 1987.

3.5 Personal and Cultural Education

3.5.1 Region - Over the three years 1985 - 87 the distribution of PACE students in southern England has dropped from 53% to 48%, although this hides a 4% increase

in the south west region. No significant changes in the percentage student populations have taken place in northern regions (with an average of 35%), Scotland (6%), Wales (7%) and Northern Ireland (2%).

3.5.2 Gender - The percentage of female registered students has increased from 44% in 1985 to 52% in 1987.

3.5.3 Age - Whilst nearly one-third of PACE students are in the 30 - 39 age group, of all the short course sectors this is the one that tends to attract the older student with approximately 46% of all students being aged over 40, and 8% aged 65 and over. This pattern has changed little over the three years 1985 - 87.

3.5.4 Occupation - The retired and unemployed, and housewives, have remained the two largest occupational groups over the period 1985 - 87 (an average of 19% and 18% respectively). The percentage of teachers has declined from 11% to 8%, whilst representation of the clerical and office occupational group has risen from 7% to 11% of these students, although total student numbers in this sector are very small.

Table 1a Analysis of finally registered new undergraduates by region (1971 - 1987)
